## RasterLink 6 Sophisticated RIP Software maximizes performance

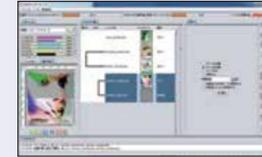

Intuitive and user-friendly operation

1. Easy to follow icons enable intuitive and user-friendly operation

2. Related settings feature in one window to simplify RIP operations with 'Register as Favourite' option available for regularly used layouts

3. Printing progress can be monitored on the main screen

**3-layer printing**  
Enables simultaneous 3-layer printing:  
e.g. Colour → White → Colour

**Web update function is supported:**  
This facility enables easy program updates and profile downloading to be performed via the internet.

#### EASE OF USE

##### Productivity maintenance - NRS<sup>\*1</sup>

The NRS substitutes defective nozzles with non-defective nozzles until the technician arrives. This feature enables uninterrupted print operations and continuous productivity.

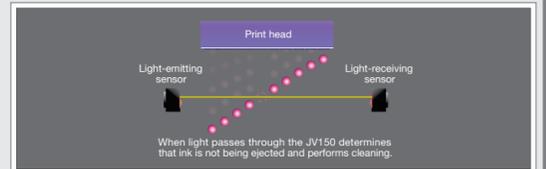

<sup>\*1</sup> NRS: Nozzle Recovery System <sup>\*2</sup> 10 nozzles per nozzle row can be registered.

##### Prevention, print quality problems - NCU<sup>\*</sup>

The JV150 is equipped with Mimaki's original automatic NCU. Clogged nozzles are automatically detected and cleaned by the NCU. If the clogging is not resolved by cleaning, the JV150 automatically sets the nozzle recovery function NRS and resumes printing. These functions significantly reduce the waste printing caused by clogged nozzles during a continuous printing run.

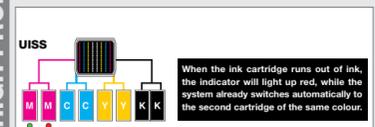

<sup>\*</sup> NCU: Nozzle Check Unit

#### HIGH PRODUCTIVITY

##### Uninterrupted Ink Supply System (UISS)

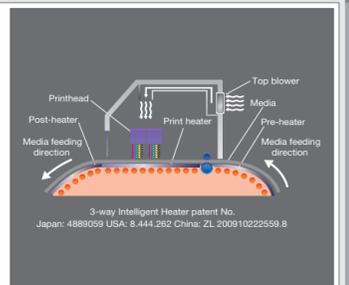

Utilises two cartridges per colour in 4-colour mode. When one cartridge runs out of ink the system switches automatically to the second cartridge of the same colour, enabling long unattended printing.

##### 3-Way intelligent heater

A 3-way intelligent heater fixes droplets placed on media. By using Mimaki's original technology in heating the media at a controlled temperature, ink can be fixed while maintaining high colour development and high image quality. Thus the JV150 provides both steady colour development and easy handling after printing.

- Pre-heater: Heats media to the optimum temperature before printing.
- Print heater: Dries ink after it lands on media before it bleeds, improving colour development.
- Post-heater: Enhances ink drying and achieves stable take-up.
- Top blower: Air blower supports drying of ink.

### KEY TECHNICAL FEATURES ...

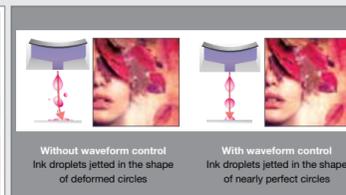

#### BEAUTIFUL OUTPUT

**MAPS3 (Mimaki Advanced Pass System 3)**  
 Reduces banding by dispersing ink drops between passes.

**Waveform Control Technology**  
 Ensures high quality print resolution, by jetting ink drops in straight lines with almost perfect round dots, delivering clear and sharp letters, lines and edges.

**Large ink dot size in high speed mode**  
 Delivers high density print by removing the gap between dots.

#### CREATIVITY

**Orange Ink (faithful colour reproduction)**  
 By using the orange ink as a process colour, 94.8% of the PANTONE colour chart is covered with approximate colours. Thanks to a wider gamut with the orange ink, food freshness can be simulated, and corporate colours can be faithfully represented.

**Light Black Ink (greater definition)**  
 The light black ink improves the printed grayscale gradation. It also faithfully represents monochrome data without introducing unexpected colour shifts. Light black ink ensures a more accurate colour representation.
